

Dax Outlook 2014 W07

The correction phase continued, finding support around 9'000.

The MACD is bearish, the RSI is low and the VDAX eased to 16.13.

There could be potential for the Dax to go back into the upward trend to 9'350 this week. A fall under 9'000 would in my opinion be a warning sign and the situation would need to be revalued.
