Dax Outlook Week 43

Last week the Dax closed at 8’865 finishing with a strong volume close a week that started with a upside window.

The MACD has changed to bullish, the RSI is nearly oversold and the VDAX plummeted from 15.34 to 12.75.

In the coming week 43, I could see the Dax correcting from the previous high rise down to nearly 8Â´730 points. All leaving the current upward trend in existence.
